

## **AoA – Wonderdraft Asset Packs**

### **General Commentary**

#### **Licensing**

This asset pack will be provided with a separate license file, please read and understand the license prior to using the assets. You may also have purchased a separate commercial license for these assets, in which case you may follow the terms of that license instead when using these assets.

If you are using Mythkeeper and purchased a separate commercial license for these assets please be aware that it will not update the information inside Mythkeeper.

If you have any licensing concerns about using these assets then please contact me.

#### **File retention**

I would strongly recommend you do not rely on these assets being continually hosted on whatever site you downloaded them from. These assets are provided through a third party, and whilst they may provide the facility for future access, this is not normally guaranteed. I recommend keeping backups if you want to ensure you do not lose them for any reason (I would suggest multiple backups).

I also suggest you save a copy of any different versions that may be made available to you. If assets are updated, it may make them incompatible with maps made with previous versions. Therefore, you should keep a copy of all versions in case you need to reinstall them to work on older maps.

#### **Using assets**

Assets are usually provided in both “sample\_color” and “custom\_colors” versions (these are Wonderdraft asset terms relating to how assets can be coloured). Assets appended SC are sample\_color; assets appended CC are custom\_colors. These are provided as separately loadable assets so you can choose which to have loaded for any map.

For mountain and tree assets which use custom\_colors you will need to set your preferred colours in the symbol tool first, then go back to the mountain or tree tool to place your assets.

If you are using these assets in other software (eg any drawing software), then you will want to use the Sample Color assets, as these are a greyscale version of the asset images.

## Technical assistance

As per the license these assets are provided “as is” without guarantee or warranty.

You are welcome to contact me, but as this is only my hobby and I have both work and family commitments, I cannot guarantee I will be able to respond or provide assistance.

The installation of these assets has been tested to ensure it functions as intended (using the default asset folder location and most current version of Wonderdraft available at the time of creation). If you are experiencing issues with installation or use within Wonderdraft, I would recommend going to Megasploot’s discord for assistance as the community there is both active and helpful. The discord can be reached through the link provided on the program’s help popup (where you will also find a link to the program manual).

If you find any issues particular to the assets themselves then please do let me know as it will at the least help me learn.
